MDM VS MTD

MDM is just for *device management*. It doesn't provide on-device threat detection, analysis or remediation out of the box. It can't block phishing, stop malware, guide users to remove threats, or scan WiFi networks for attacks.

**MTD is for security, MDM is for management.
Combining them gives you the best protection.**

	MTD	MTD + MDM	MDM
Protection against phishing	✓	✓	-
AI-powered malware protection	✓	✓	-
Cyber Essentials mobile compliance	✓	✓	-
Zero-Trust access to company data	✓	✓	-
Remote configuration of mobiles	-	✓	✓
Remote app management and installation	-	✓	✓

If MDM is like hiding your valuables from burglars, MTD is like locking the front door so you don't get burgled

Trustd MTD protects devices and restricts access to company data for untrusted devices - whether or not they are managed by an MDM

Have MDM? Or thinking about it?

MDM can help to put a secure fence around sensitive data, but doesn't detect or remediate mobile threats. Also, MDM can create challenges around employee privacy, particularly on personal devices, which hampers adoption and leaves security gaps.

Layering Trustd MTD on top of MDM provides protection from phishing and malware, ensures devices are patched and up to date, and protection from Man-in-the-Middle attacks.

Trustd MTD offers extra privacy for BYOD devices, and through your MDM has Zero-Touch deployment and One-Touch enrolment, so you can ensure full adoption.

When you have no mobile security at all

No MDM? No problem! Trustd MTD is a great standalone mobile security solution. It's low-cost, quick and simple to deploy across both BYOD and corporate owned devices. Because of Trustd's privacy-first design, employees are often more comfortable installing our MTD on their devices than more invasive MDMs.

If you have no mobile security measures in place, it's a good idea to start with MTD before implementing MDM. You can start plugging security holes straight away across all mobile devices, and block access to business data if a device is untrusted.

You can even fulfill all your mobile device-related Cyber Essentials Plus criteria using Trustd MTD.
